PELO FUTURO DA INOVAÇÃO

Introduction

Field of research focused on studies in **underwater robotics**, aspects of computational dynamics, applications of basic functionalities of a robotic and search and analyze technology trends of this field.

Goal

The training of researchers in underwater robotics

Motivation

AUVs and ROVs are playing a important role in **oil & gas exploration**, military and other areas. Many important companies are demanding investments in this area.

"AUV and ROV Market to reach \$7.2 billion by 2026" [MarketReport 2022].

Main Tools

In this Field of **Reasearch** and **developoments** there are great tools that can be used.
On the **research spectrum**

CmapTools

Scopus

Main Tools

On the **development research spectrum**

ROS

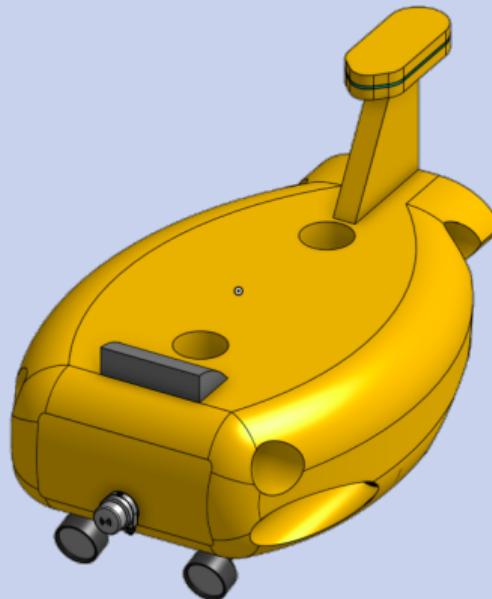

OpenVFOAM®

Projects

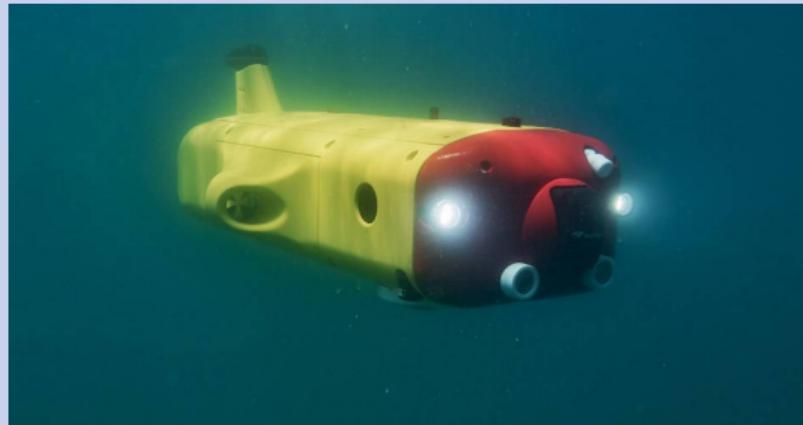

turBOT

The goal is to develop a short size AUV to operate in shallow waters.

FlatFish@ROS

This project is aimed to bring all stuff of FlatFISH to work on ROS

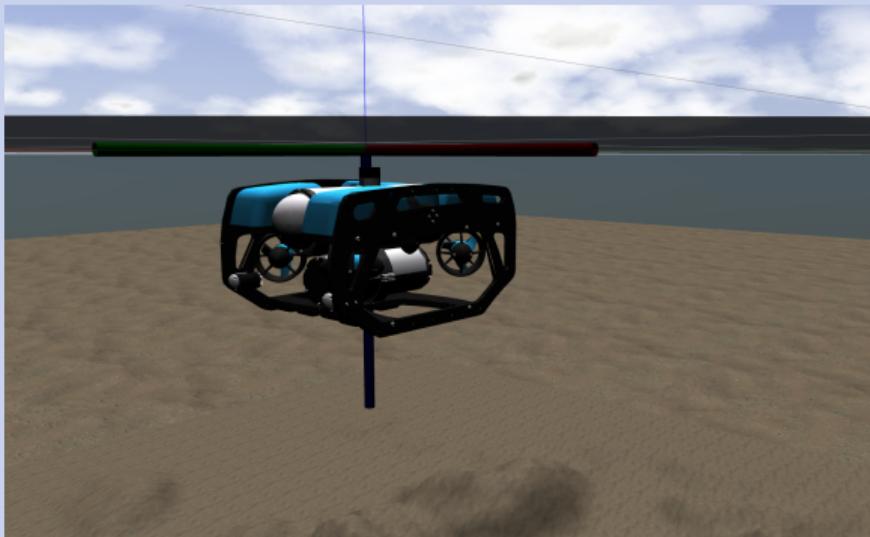

Pirabots

The goal is to test functionalities on ROVs: BlueROV and BirROV.

Challenges

Pipeline identification - Solo
Pipeline Following - In Group

Members

The members of the line of research are:

Marco Reis

Alexandre Adonai

Matheus Anselmo

Tâmara Lins
